

Loblolly Pine (*Pinus taeda*)

and Drought: A Selected Bibliography

by Dr. Kim D. Coder, Daniel B. Warnell School of Forest Resources,
University of Georgia 5/99

Loblolly pine (*Pinus taeda*) is critical to timber markets and to landscapes. Seasonal water shortages impact loblolly in a variety of ways. As part of tree health care and drought management, the following publications are listed to facilitate information exchange. This is not an inclusive / exhaustive list of publications, but provides a broad range of papers dealing with drought issues as they apply to loblolly pine. The literature citations in each of these papers will provide a central core of research and outreach topics available in the scientific literature.

- Abdollahi, K.K. Bilan, M.V. Ning, Z.H. 1992. Physiological responses of loblolly pines from different geographic origins to cyclic drought. Proceedings of the Society of American Foresters National Convention. Pp. 532-533.
- Amidon, T.E. Barnett, J.P. Gallagher, H.P. McGilvray, J.M.. 1982. A field test of containerized seedlings under drought conditions. USDA-Forest Service General Technical Report SO -37. Pp. 139-144.
- Baldocchi, D. 1997. Measuring and modelling carbon-dioxide and water vapour exchange over a temperate broad-leaved forest during the 1995 summer drought. Plant, Cell and Environment. 20:1108-1122.
