

**Technology Transfer Activities of the Southern Center
for Wildland-Urban Interface Research and Information**

L. Annie Hermansen-Baez and Edward Macie, USDA Forest Service Southern Center for Wildland-Urban Interface Research and Information

The Southern Center for Wildland-Urban Interface Research and Information (Center) is part of a research work unit of the USDA Forest Service Southern Research Station. The Center's mission is to develop and communicate guidelines, models, and tools needed by natural resource managers, policymakers, planners, and citizens to reduce risks to ecosystems and human communities in urban and urbanizing landscapes. The emphasis on packaging and delivering science for end users is thus an important component of the Center's work. There are four main methods that the Center uses to disseminate and exchange information about interface issues. They include (1) electronic media (e.g. website, listserv), (2) publications, (3) professional development courses and conferences, and (4) model projects/demonstrations.

The InterfaceSouth website (www.interfacesouth.org) provides information about Center products, research, and training projects, plus serves as a clearinghouse of information about interface events, publications, weblinks, and much more. The Center's listserv, SWUINET, distributes the InterfaceSouth Update and Post (electronic newsletter and announcements respectively) to natural resource professionals across the South. The Center produces several kinds of publications for natural resource professionals, including fact sheets, general technical reports, journal articles, and books. The Center also develops professional development training courses, outreach programs, and conferences in cooperation with several partners.

Proceedings

**EMERGING ISSUES
ALONG URBAN-RURAL INTERFACES II:
LINKING LAND-USE SCIENCE AND SOCIETY**

April 9-12, 2007
Sheraton Atlanta
Atlanta, Georgia

Edited by:
David N. Laband

Conference Co-sponsors:

Auburn University Center for Forest Sustainability:
A Peak of Excellence at Auburn University

USDA Forest Service
Southern Center for Wildland-Urban Interface Research & Information

National Science Foundation

Plum Creek Timber Company

Georgia Forestry Commission

Auburn University Forest Policy Center

Auburn University School of Forestry and Wildlife Sciences

Land Policy Institute, Michigan State University

September 2007
