

# Carbon Credits for Communities

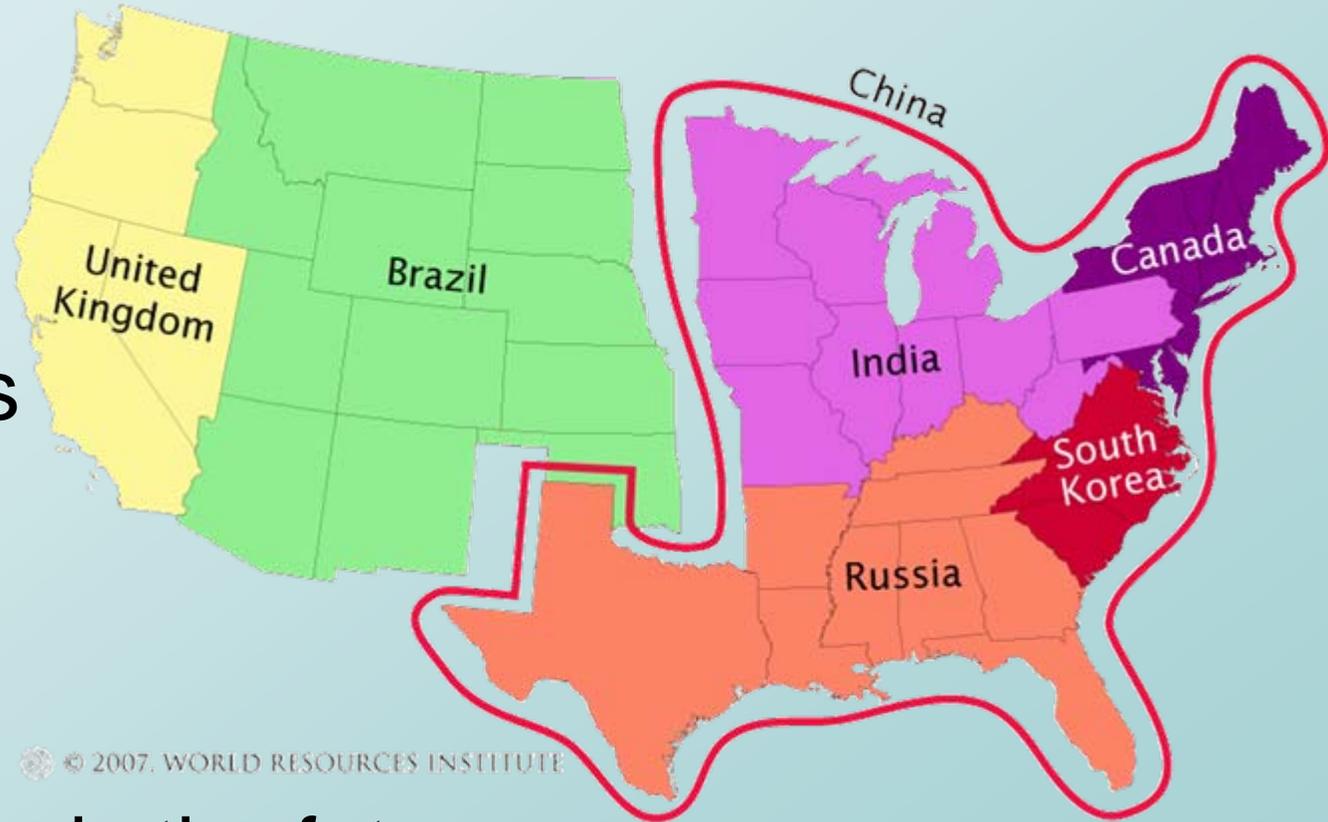

An opportunity or responsibility?

Scott Maco  
Research & Development Analyst

# Carbon Accounting

- Background – carbon emissions law in the U.S.
- Registry opportunities
- Examples & eligibility
- Moving towards the future
- What can you do now?

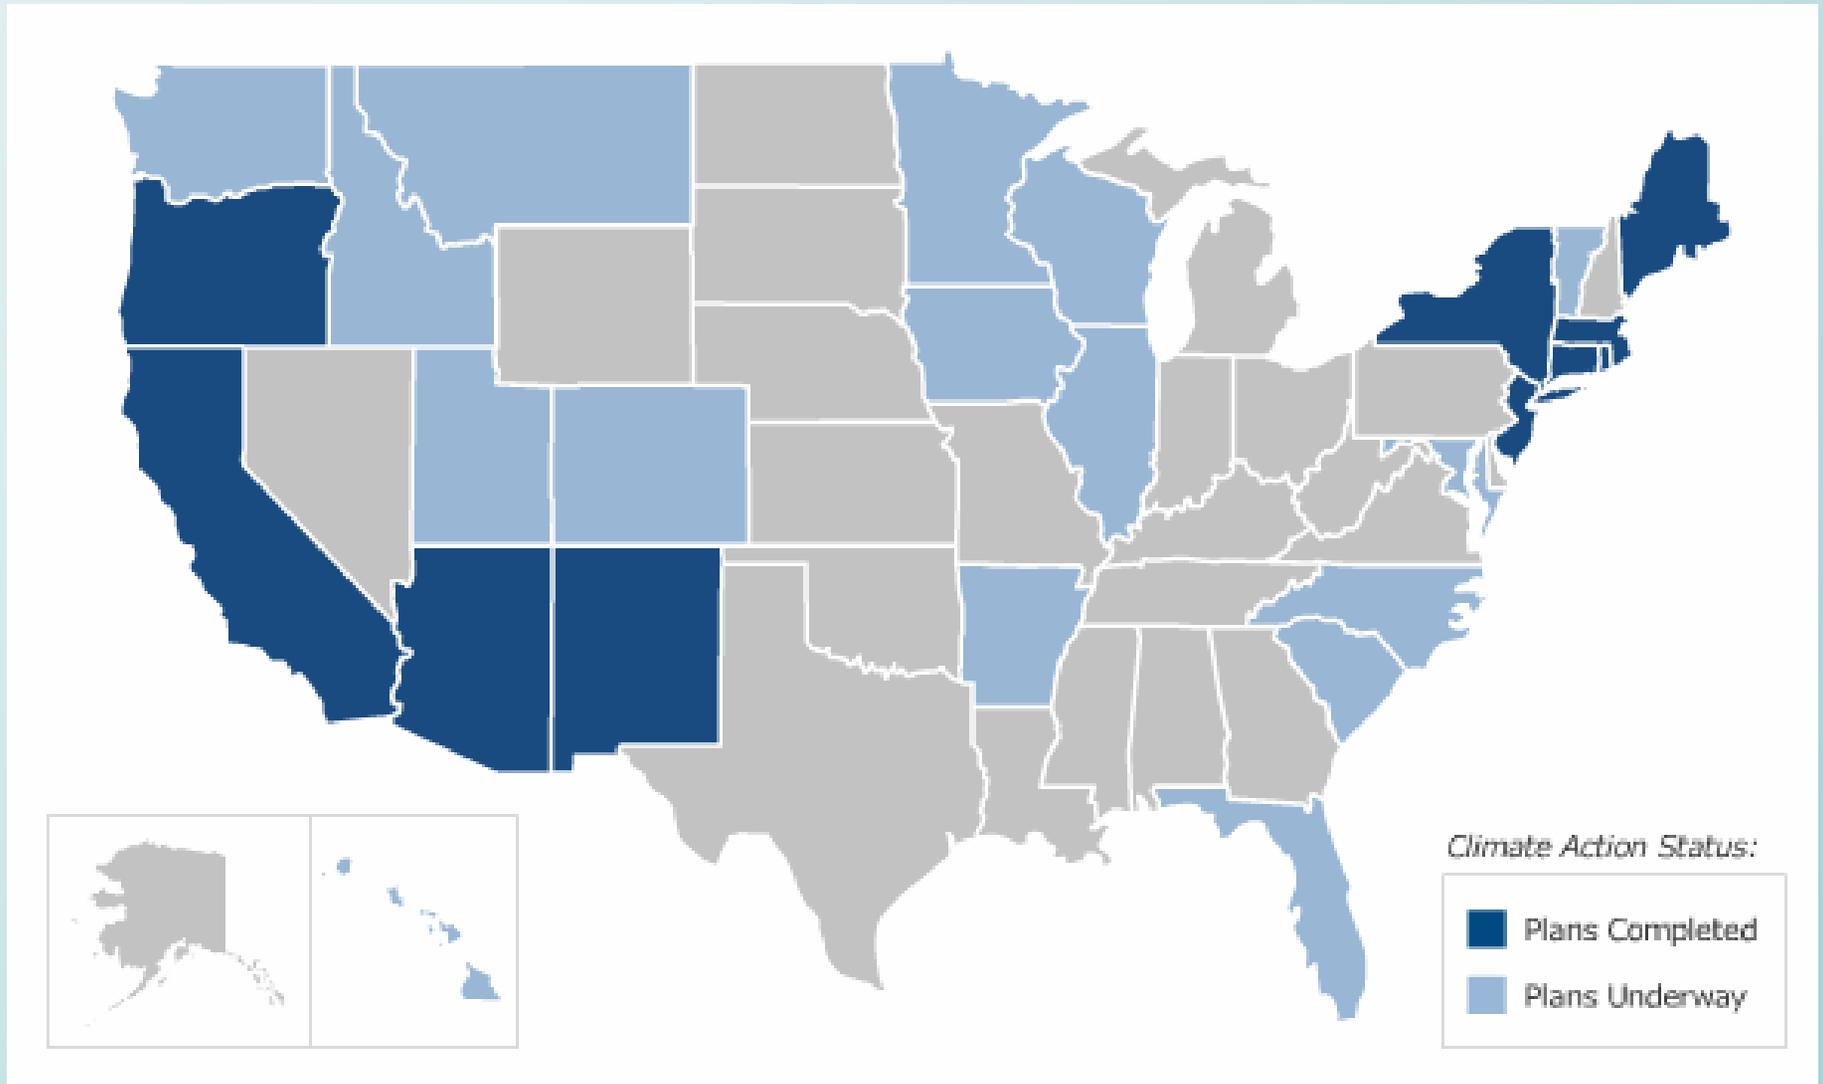

# Carbon what?

- Kyoto Protocol
  - Emission caps became law in 2005
  - Reduce carbon by at least 5% below 1990 levels by 2012
- Carbon financial instruments
  - Cap and Trade System (EU ETS)
  - Carbon “credit”
- Registry
  - Allows calculation, tracking, reporting of emissions or storage over time
  - Consistency, transparency, and verification
- Carbon Market
  - Combination of Registry and trading platform (exchange)
  - Metric tons of CO<sub>2</sub> equivalent - GWP

# So what does this mean for Urban Forestry?

- 4 ways an entity can reduce emissions to become compliant:
  - Reduce point source emissions
  - Use alternative energy sources
  - Purchase credits from another entity
  - Purchase offset credits from sequestration projects
- Forestry project types: afforestation, reforestation, managed forests, conservation projects

# U.S. Climate Policy Action (early-2007)

# Regional Initiatives

- **The Western Climate Initiative (WCI)**
- **Western Regional Air Partnership**
- **West Coast Governors' Global Warming Initiative**
- **Conference of New England Governors and Eastern Canadian Premiers 2001 Climate Agreement**
- **Regional Greenhouse Gas Initiative (RGGI)**

# State Initiatives

- 19 states with GHG reduction targets
- 14 states with laws or considering legislation for GHG reductions
- 16 states participating in regional cap & trade initiatives: WCI (6); RGGI (10)
- 40 states participating in National “Climate Registry”
- 4 states with GHG emission generation standards
- 19 states with active Climate Legislation Commissions

# Greenhouse Gas Registries

- **Department of Energy 1605(b) program**
  - Voluntary
  - Allows urban forestry projects
  - Verification optional
- **California Climate Action Registry**
  - Voluntary until mandatory caps begin (2012)
  - Urban forestry protocols in developments (4/08)
- **Chicago Climate Exchange**
  - Voluntary until entry, but binding for participants
  - Urban forestry protocols exist
- **Regional Greenhouse Gas initiative**
  - Mandatory in 2009
  - Urban Forest projects not specified

# Registries Entry

- Membership is legally binding commitment
- GHG emission registry, reduction and trading system
- 2003 – 2010 = pilot market
- Urban Forestry Protocols Exist

- Voluntary & non-binding
- Registry & Reporting protocols = “gold standard”
- 2012 – Mandatory caps begin
- 2020 – CO2 emissions reduced to 1990 levels
- Urban Forestry Protocols in Development (April '08)

# Urban Forestry Offset Project Rules:

- No urban forestry offset project to date
- Entity level offsets encouraged
- Non-member must have insignificant emissions (25,000 mt)
- Project types:
  - Carbon storage offsets only (sequestration)

- No urban forestry offset project to date
- Entity level offsets allowed
- Non-entity projects allowed without size restriction
- Project types:
  - Carbon storage (direct)
  - Tree shading (indirect)
  - Bio-energy

- Can I get credit for simply managing my forest?

## ➤ **Additionality**

- Exceeds/improves upon current management practices
- Goes beyond “business-as-usual”
- Not required by any regulatory requirements

## ➤ **Permanence**

- Perpetual easement dedicated to urban forestry use
- ordinances/codes/covenants and enforcement to protect trees
- Written contracts guaranteeing carbon stock maintenance

## ➤ **Leakage**

- Activity shifting
- Describe existing practices (management plan)

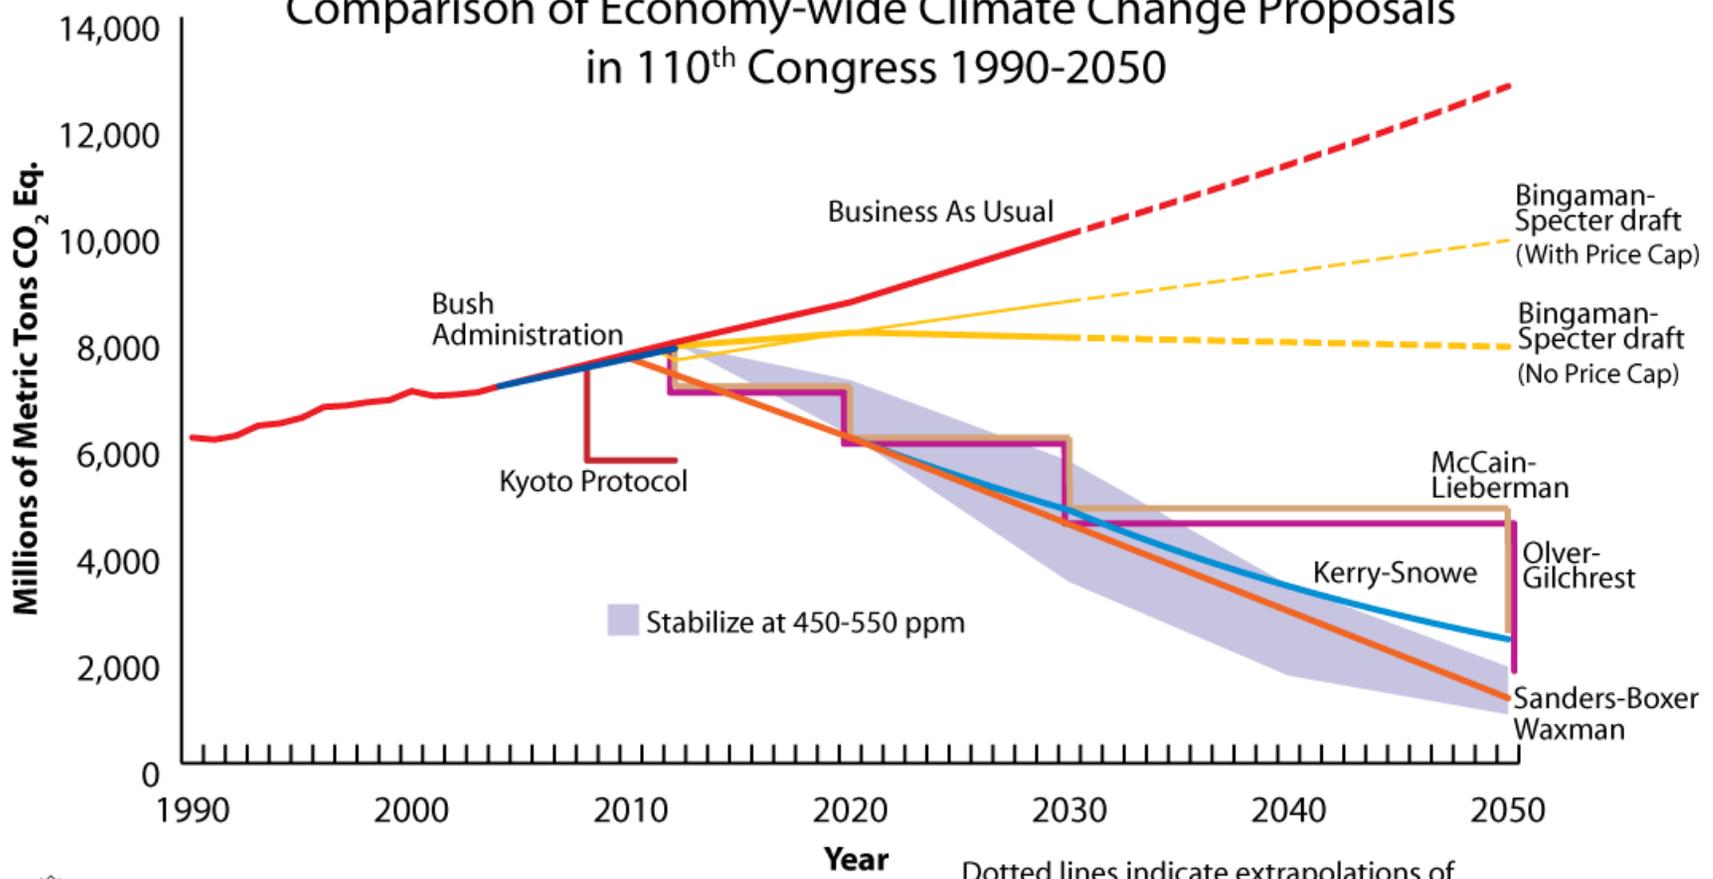

# Why get involved?

- Offset entity participant emissions
- Revenue
  - Only under CCX currently
  - Cap & Trade Regulation
- Protecting new action
  - Baseline established at time of registry
  - Post-1989 planting eligibility
- Management Efficiency
  - Comprehensive management plans & inventories
- Highlight value of trees as “green” infrastructure

1. Submit project proposal and/or project questionnaire to Registry
2. Collect baseline information
3. Calculate difference between BAU & Project
4. Obtain independent project verification
5. Register offset credit (annual basis)
6. Receive Carbon Credit for Exchange Trades

# National Policy?

## Comparison of Economy-wide Climate Change Proposals in 110<sup>th</sup> Congress 1990-2050

 WORLD RESOURCES INSTITUTE

Dotted lines indicate extrapolations of Energy Information Administration projections  
 Modified: May 10, 2007

# "The Climate Registry"

- Accurate, Transparent, consistent measurements of greenhouse gases across borders
- Draft framework in 2008
- WRI GHG protocol compatible

# What can you do now?

- Document current business practices
- Inventory
  - Sample or complete
  - Data requirements
- Develop sequestration project
  - Functional species selection
- Registry/exchange membership
  - Get your city on board!
